Week 6 Milestone Worksheet

SECTION A: Before Your Team Meeting

Step 1: Restate your team's problem statement

Please write **your team's** agreed-upon **problem statement** from Week 5 here:

Step 1: My Team's Problem Statement
Problem: Young women in rural Ethiopia face limited access to digital education resources due to poor infrastructure and lack of localized content. **Impact: This contributes to lower digital literacy, reduced career opportunities, and a widening gender gap in tech.** **Opportunity: By developing an offline-accessible, culturally relevant learning platform, we can empower young women with the skills and confidence to pursue tech careers.**

Step 2: Bad Idea Brainstorm

BEFORE you meet with your team, conduct a **Bad Idea Brainstorm** with yourself. **List at least 10 bad ideas** for how you might solve your problem. You can get completely ridiculous.

For example: Sharks with laser beams in their heads who burn up microplastics in the ocean, bees that telepathically communicate in order to tutor children who don't have access to quality education, etc.

The dumber the idea, the better! The purpose of this is to get your mind open to generating ideas without fear of them being wrong, dumb, or bad. *(Stay in divergent thinking.)* Need help? You can get inspiration from: http://labs.jackpine.co/projects/FirstBadIdea/

Step 2: Individual Bad Ideas
1.Monthly Quiz Competitions: Organize monthly quiz competitions with no preparation or study materials provided, leading to confusion and frustration. **2.Social Media for Learning: Rely on social media platforms for educational content, assuming everyone has reliable access and understands how to navigate them.** **3.Virtual Reality Lessons at a Cost: Offer virtual reality lessons that require expensive equipment, making them inaccessible to those in need.** **4.Educational Podcasts in a Foreign Language: Launch a podcast series in a language that most students don't understand, leaving them out of the learning loop.** **5.DIY Solar-Powered Tablets: Encourage students to build their own solar-powered tablets from random household items, which may not work at all.**

6.Coding Workshops in a Remote Cave: Host coding workshops in a cave with no internet access, making it hard for participants to practice online.

7.Educational Content on VHS: Create educational videos on VHS tapes, requiring students to find working VCRs to watch them.

8.Mobile Libraries on Bicycles: Set up a mobile library that only operates during heavy rain, making it nearly impossible to access.

9.Online Classes via Smoke Signals: Use smoke signals to communicate class schedules and lesson updates, which would be difficult to interpret.

10.Textbook Delivery by Donkeys: Rely on donkeys to deliver outdated textbooks, which could take weeks to arrive and may not be relevant.

Step 3: Possible ideas

Next, **list at least 5 "possible ideas" to address your problem.** These do **NOT** have to be good ideas. The only constraint is that they should be at least theoretically possible. They should involve some sort of technology (either a piece of software like an app or algorithm or a physical device such as a robotic fish or machine that scans your DNA). You're still in Divergent thinking here, so don't judge your ideas as good or bad.

Step 3: Individual Possible Ideas
1.Offline Learning App: Develop a mobile app that allows users to download educational content, including videos and interactive lessons, for offline access. The app could feature local languages and culturally relevant materials. **2.Community Learning Hubs: Set up solar-powered learning hubs equipped with tablets and internet access in central locations. These hubs could be staffed by local mentors to facilitate learning sessions and provide support.** **3.Educational Radio Programs: Create a series of educational radio programs that cover various subjects. The programs could include call-in segments for questions and community discussions to engage listeners.** **4.Portable Learning Kits: Design portable learning kits that include solar-powered devices, printed materials, and hands-on activities. These kits could be distributed to groups of young women for collaborative learning experiences.** **5.Text Message Learning Service: Implement a text message-based service that sends daily educational tips, quizzes, and resources directly to users' phones. This would cater to areas with limited internet connectivity.**

6.Interactive Learning Stations: Establish interactive learning stations in community centers that feature touchscreen devices with pre-loaded educational content. These stations could be accessed during community events or designated times

7.Local Mentorship Program: Create a program that pairs young women with local tech professionals for mentorship via mobile or in-person meetings. This could help build confidence and provide personalized guidance on tech-related skills

!!! PLEASE BRING THE ABOVE WORK WITH YOU TO YOUR TEAM MEETING.

Please go back to Savanna and continue with your learning content. You will be prompted on when to return to complete Section B.

SECTION B: Team Meeting Output

Step 4: Meeting Date, Time, & Location

Please list when and where your team meeting took place.

Step 4: Meeting Date, Time, & Location
A. Date:5/11/2025 B. Time: 10:25 am C. Location: addis abeba, 22

Step 5: Meeting Attendees

Please list who attended your team meeting, and their primary role.

Step 5: Meeting Attendees
1.biruktawit fiseha 2.yeabsira goitom 3.yanet girma 4.marya hussen 5.amanuel abebe

Step 6: Bad Idea Brainstorm (Team)

Everyone should share several of their previously bad ideas from Step 2 above. Then as a team, you must **generate at least 10 more new bad ideas.**

Remember, the dumber the idea, the better! This is to help you work as a team to be non-critical. **Stay in divergent thinking.** It helps to say *"thank you"* after every idea is shared.

Step 6: Bad Ideas (Team)
1.Talking Trees: Create a forest of talking trees that provide math lessons, but only at midnight and only if you dance around them. **2.Textbook Delivery by Carrier Pigeons: Use carrier pigeons to deliver textbooks, but they often get lost or eat the materials.** **3.Educational Flashcards with Wrong Answers: Create flashcards that intentionally have incorrect answers to encourage "creative thinking."** **4.Study Groups in a Silent Room: Set up study groups in completely silent rooms, making it awkward and hard to collaborate.** **5.Fortune Cookie Quizzes: Use fortune cookies as a basis for quizzes, where each cookie gives a vague piece of advice instead of answers.** **6.Educational Materials in Jargon: Provide all learning materials written in complicated jargon that no one understands.** **7.Classes Taught by Robots with Glitches: Use malfunctioning robots to teach classes, resulting in confusing and nonsensical instructions.** **8.Teleportation Study Groups: Develop a teleportation system that only works if everyone agrees on the same study topic first.**

9.Educational Karaoke: Require students to sing all lessons in karaoke style, hoping that the fun will make learning stick.

10.Underwater Learning Retreats: Host underwater retreats for students to learn while swimming, but provide no breathing equipment.

Step 7: Possible ideas (Team)

Next, everyone should **share at least 2 of their possible ideas from Step 3 above.** Your team then needs to come up with at least **5 new "possible ideas" to address your problem.** The only constraint is that they should involve some sort of technology (either a piece of software like an app or algorithm, or a physical device such as a robotic fish or machine that scans your DNA.

You're still in Divergent thinking here, so don't judge any ideas as good or bad. Again, it helps to say **"thank you"** after every idea is shared.

Step 7: Possible Ideas (Team)
1.Interactive Learning App with Gamification: Create an app that turns learning into a game, where students earn points and rewards for completing educational challenges and quizzes. **2.Augmented Reality Learning Experiences: Develop an AR application that overlays educational content onto physical locations, allowing users to explore their environment while learning.** **3.Offline Content Distribution via USB Drives: Distribute USB drives loaded with educational videos, e-books, and interactive resources that can be shared among students.** **4.AI-Powered Chatbot Tutor: Create a chatbot that students can text for help with homework or understanding concepts, providing instant feedback and resources** **5.Portable Solar-Powered Projectors: Design portable projectors that can display lessons in community settings, allowing groups of students to learn together**

even without internet access.

6.Learning Through SMS Quizzes: Implement a service that sends weekly educational quizzes via SMS, allowing students to respond directly and receive instant feedback.

7.Digital Storytelling Workshops: Host workshops that teach students to create digital stories using simple tools, helping them express their ideas while learning technical skills.

Step 8: Narrowed Ideas

Your next task is to **narrow your choices,** which will put you in a **convergent thinking mindset.** You should discuss and debate this and try to reach a consensus on **3 ideas for a solution** (or partial solution) to your problem that your team will consider working on for the rest of Month 2. These ideas can be totally new, the same, or variations from ideas you've already come up with.

Remember that they should involve some sort of technology *(either a piece of software like an app or algorithm, or a physical device such as a robotic fish or machine that scans your DNA).*

You will not have to build the solution out. But you will have to create some type of basic prototype (if it is a device) or a set of wireframes (if it is an app/software). You will not have to actually create the technology or code.

Step 8: Top 3 Ideas (Team)
1.Interactive Learning App with Gamification: • **Description: Develop a mobile app that gamifies the learning experience, allowing users to earn points and rewards for completing educational challenges and quizzes tailored to their needs.** • **Prototype: Create wireframes showcasing the app's main features, such as the user dashboard, learning modules, and a rewards system.**

2.Portable Solar-Powered Projectors:

- **Description: Design portable projectors that can display educational content in community settings, making it accessible for group learning sessions even in areas without reliable electricity.**
- **Prototype: Build a basic mock-up of the projector's design and functionality, including how it can project various educational materials.**

3.AI-Powered Chatbot Tutor:

- **Description: Create a chatbot that students can interact with via text to get immediate help with homework and concepts, tailored to their learning pace and style.**
- **Prototype: Develop a flowchart outlining the chatbot's conversation pathways and responses based on user input.**

Step 9: Selected Solution

Lastly, your team must agree on one idea for a solution (or partial solution) that you will work on for the rest of Month 2.

Remember, the solution should involve some sort of technology and be possible to create—but feel free to make it very ambitious! You will have to create some type of basic prototype (if it is a device) or a set of wireframes (if it is an app/software). You will not have to actually create the technology.

You must find a fair way to reach a consensus with your group, including a discussion in which everyone's voice can be heard.

Step 9: Team's Final Selected Solution Idea
Overview: • **The team agrees to develop a mobile app that gamifies the learning experience, allowing young women in rural Ethiopia to engage with educational content interactively. Users can earn points, unlock rewards, and complete challenges tailored to their learning needs.** **Consensus Process:** • **Discussion: Gather input from all team members about the proposed**

ideas. Encourage each member to share their thoughts on the feasibility, impact, and potential challenges of the interactive learning app compared to the other options.

- **Criteria for Selection: Consider factors such as:**
  - **User Engagement: How well the gamification aspect will attract and retain users.**
  - **Accessibility: The app's ability to function offline and be culturally relevant.**
  - **Scalability: Potential for expansion and integration of more learning materials in the future.**
- **Voting: After discussions, hold a vote where each team member can rank the options. The idea with the most support will be selected.**

Next Steps:

- **Prototype Development: Start creating wireframes that outline the app's key features, user interface, and navigation flow.**
- **Feedback Loop: Plan for regular check-ins to gather feedback on the wireframes and ensure the app aligns with the needs of the target audience.**

Step 10: Action Items

In your meeting for Week 7, you will need to share work on a **prototype** or **wireframes**. Please list out here what specific people will do to contribute to this before the next meeting.

Step 10: Action Items
PERSON / COMMITTED ACTION: **1.Wireframe Design (biruktawit fiseha)** • **Create initial wireframes for the app's main screens, including the home page, learning modules, and rewards dashboard.** • **Research best practices for user interface design to ensure accessibility and user-friendliness.** **2.Content Development (marya hussen)** • **Identify key educational topics to be included in the app and outline potential challenges and quizzes.** • **Collaborate with local educators to gather culturally relevant content and ensure it meets the needs of the target audience** **3.Gamification Strategy (amanuel abebe)** • **Develop a plan for the gamification elements, including how points, rewards, and challenges will work.** • **Create a concept for user engagement strategies, such as notifications**

and feedback mechanisms.

4.Technical Feasibility Assessment (yanet girma)

- Research the technical requirements for developing the app, including offline capabilities and potential platforms (iOS, Android).
- Present findings on any necessary tools or software that may be useful for wireframe creation.

5.User Testing Plan (mariamawit messay)

- Draft a plan for how to test the wireframes with potential users to gather feedback on design and functionality.
- Prepare a set of questions to guide the testing process and ensure comprehensive feedback.

6.Presentation Preparation (yeabsira goitom)

- Compile all the work into a cohesive presentation for the Week 7 meeting.
- Ensure that there is a clear narrative on how the app will address the problem and engage users.

SECTION C: Reflections

Step 11: Team Roles

Relist your team members' names and their primary roles.

Step 11: All team members & their roles
1.biruktawit fiseha: Wireframe Designer • **Responsible for creating initial wireframes for the app's main screens and ensuring user-friendly design.** **2.marya hussen: Content Developer** • **Focuses on identifying key educational topics and collaborating with local educators for culturally relevant content.** **3.amanuel abebe: Gamification Strategist** • **Develops the gamification elements, including points, rewards, and user engagement strategies.** **4.yanet girma: Technical Feasibility Assessor** • **Researches the technical requirements for app development and**

assesses necessary tools or software.

5.mariamawit messay: User Testing Coordinator

- **Drafts a user testing plan and prepares questions for gathering feedback on the wireframes.**

6.yeabsira goitom: Presentation Lead

- **Compiles all work into a cohesive presentation for the Week 7 meeting, ensuring a clear narrative on the app's benefits.**

Step 12: Reflections

Please share your personal reflections on your experience with your team so far.

Step 12: Team Process Reflection

A. What is working well with your team?

Team members feel comfortable sharing their ideas and opinions, leading to a variety of creative solutions.

B. What is one good thing that happened during your team meeting?

During our last team meeting, we had a productive brainstorming session where everyone contributed ideas freely. It felt encouraging to see everyone engaged and excited about the potential of our app.

C. What is one thing your team could do better in the next meeting?

Our team could improve time management during discussions. We sometimes drift off-topic, which can lead to less time for critical decisions. Setting a clear agenda with time limits for each topic might help keep us focused.

D. Are you experiencing any concerns or frustrations with your team? If yes, what can you personally do to lessen the concern/frustration?

I have noticed some hesitance among team members to voice their opinions, which can hinder our discussions. To address this, I can encourage quieter members to share their thoughts and create a more inclusive environment

E. How would you rate your ability to communicate with your team members on a scale of 1 to 4? (1=extremely poor and 4=excellent)

I would rate my ability to communicate with my team members as a **3**. I feel comfortable sharing ideas but recognize that I could work on actively listening to others more effectively.

F. Overall, how satisfied are you with how well your team is working together? *(On a scale of 1 to 4, with 1=extremely poor and 4=excellent)*

Overall, I would rate my satisfaction with how well our team is working together as a **3**. We have good collaboration, but there's room for improvement in terms of communication and engagement.

G. Is there anything else you'd like to share about your team and their process?

I appreciate the diversity of perspectives within our team, which enriches our discussions. I believe that by continuing to foster open communication, we can enhance our collaboration and create a successful project.

Once you have completed this worksheet:

1. Export/convert to .pdf.
2. Rename it per the instructions.
3. Upload to Savanna as your Milestone 6 Submission.
4. **Celebrate a job well done!**
